Alex Young

Portland, OR

971-330-0904 alex.shan.young@gmail.com https://axyoung.github.io

Education

UC Davis **Sep. 2022 – June 2024**
Master of Science in Computer Science – Graduated June 2024 – GPA: 3.91/4.00 *Davis, California*

Oregon State University **Sep. 2018 – June 2022**
Bachelor of Science in Computer Science – Graduated June 2022 – GPA: 3.87/4.00 *Corvallis, Oregon*

Relevant Coursework

- Software Engineering
- Web Development
- Theory of Computation
- Operating Systems
- Databases
- Analysis of Algorithms
- Computer Security
- Computer Networks
- Artificial Intelligence
- Assembly
- Computer Architecture
- Compilers
- Cloud Applications
- Parallel Programming
- Machine Learning
- Programming Languages

Relevant Experience

Teaching Assistant **UC Davis**
ECS 034 | Software Development in UNIX and C++ *Fall 2022 - Winter 2023*

- Teaching assistant for ECS 34 at UCDavis. Responsible for interactive grading, online discussions, office hours and lecturing.

ECS 171 | Machine Learning *Spring 2024*

- Teaching assistant for ECS 171 at UCDavis. Responsible for assignments, grading, discussions and office hours for upper division machine learning.

Graduate Student Researcher **UC Davis**
Biases in LLMs | Setareh Rafatirad's Lab *Spring 2023-Spring 2024*

- Worked with a team and faculty conducting research regarding NLP and LLMs. Collected and analyzed large samples of text data to investigate biases. Wrote a paper to publish results.

Technical Skills

Languages: Python, C, C++, HTML/CSS, SQL, JS, Java
Developer Tools: PyTorch, TensorFlow, VSCode, Jupyter, Github, Atmel Studio, Docker

Projects and Research

Societal Biases in Generative AI with a focus on Education *Jupyter Notebook, Python, OpenAI* **June 2023**

- Worked on a graduate level project focusing biases in machine learning under Professor Rafatirad.
- Ran generative models on test sets generated to look for biases.
- Queried OpenAI models alongside other generative AI such as T5 and BERT to investigate biases.
- Find more at https://arxiv.org/abs/2511.14153

Muvi App | *JS, React, CSS* **February 2022**

- Developed a web-app that uses the TMDB api to display lists of movies and their details. The app includes extra functionalities such as login and a watchlist.
- This project was memorable due to it's sleek and scalable design.
- Find more at https://github.com/osu-cs499-w22/muvi

Tarpaulin API *JS, Docker* **June 2022**

- Developed a cloud backend for a lightweight course management tool. This RESTful API allows users to store and see information about different courses and assignments.
- This project gave me practical experience with defining APIs as well as an appreciation for quality API design.
- Find more at https://github.com/osu-cs493-sp22/final-project-team-12

Apollo 11 Simulation Project | *AVR assembly, Atmel Studio* **March 2021**

- Developed code for calculating more advanced mathematics to simulate the calculations used by the Apollo 11.
- I quite enjoyed the more detail-oriented process of working with assembly langauge to complete this project.

smallsh | *C, Visual Studio Code* **February 2021**

- Developed a smallsh shell using C for Operating Systems course.
- This shell provided a prompt for user inputs and processed shell commands, as well as both foreground and background processes.
- I am proud of this project because it is the cumulation of my C++ learning and was very difficult to implement.
