Education

UC Davis

Sep. 2022 – June 2024

Master of Science in Computer Science – Graduated June 2024 – GPA: 3.91/4.00

Davis, California

Oregon State University

Sep. 2018 – June 2022

Bachelor of Science in Computer Science – Graduated June 2022 – GPA: 3.87/4.00

Corvallis, Oregon

Relevant Coursework

- | | | | |
|-------------------------|--------------------------|---------------------------|-------------------------|
| • Data Structures | • Databases | • Artificial Intelligence | • Machine Learning |
| • Software Engineering | • Analysis of Algorithms | • Cloud Applications | • Programming Languages |
| • Theory of Computation | • Computer Networks | • Parallel Programming | • Probability Models |

Relevant Experience

Teaching Assistant

UC Davis

ECS 034 | Software Development in UNIX and C++

Fall 2022 - Winter 2023

- Teaching assistant for ECS 34 at UCDavis. Responsible for interactive grading, online discussions, office hours and lecturing.

ECS 171 | Machine Learning

Spring 2024

- Teaching assistant for ECS 171 at UCDavis. Responsible for assignments, grading, discussions and office hours for upper division machine learning.

Graduate Student Researcher

UC Davis

Biases in LLMs | Setareh Rafatirad's Lab

Spring 2023-Spring 2024

- Worked with a team and faculty conducting research regarding NLP and LLMs. Collected and analyzed large samples of text data to investigate biases. Wrote a paper to publish results.

Technical Skills

Languages: Python, C, C++, HTML/CSS, SQL, JS, Java

Developer Tools: PyTorch, TensorFlow, VSCode, Jupyter, Github, Atmel Studio, Docker, OpenAI API

Projects and Research

Societal Biases in Large Language Models *Jupyter Notebook, Python, OpenAI*

June 2023 - June 2024

- Worked on a graduate level project related to biases in machine learning under Professor Rafatirad.
- Literary review on social biases in large language models.
- Fine-tuned OpenAI models alongside other popular generative AI to investigate biases, while considering mitigation techniques including data augmentation.
- Find more at <https://arxiv.org/abs/2511.14153>

Tokenizing audio: Pipelining TokenLearner Models | *Keras, Python*

June 2023

- Utilized TokenLearner model to improve audio recognition capabilities. TokenLearner is an adaptive tokenizer developed for ViTs that we repurposed for audio.
- Find more at https://github.com/axyoung/axyoung.github.io/blob/main/files/Tokenizing_audio_paper.pdf

Twitter Sentiment Analysis *Python, scikit-learn*

November 2022

- Analyzed the effects of sentiments and observed the sorts of patterns that caused them with a focus in cyberbullying.
- This is a more basic project, but one with very real, real world implications and understanding. The ideas behind this eventually lead to my graduate project.

Intel DevCloud with Artificial Intelligence | *Kaggle, Jupyter, MongoDB, Python, React, docker, flask*

March 2022

- Developed and ran inference on Deepfake detectors in Intel DevCloud as part of an overarching capstone project.
- Developed a frontend site to explore the Deepfake detection in real time.
- Coded backend and cloud connection to allow for real time data transfer to analyze files.
- Find more at <https://github.com/OSU-AI-with-Intel-DevCloud/Deepfake-Detection>

AI for Good in Education

March 2021

- Discuss how AI can be used for good in the field of education.
- Analyze the use of AI in education from the point of view of Social Contract Theory.
- This is a vital discussion that grows increasingly relevant to this day as AI usage increases.
- Find more at github.com/axyoung/Ethics-in-CS
